

Factory method for easy creation of plants

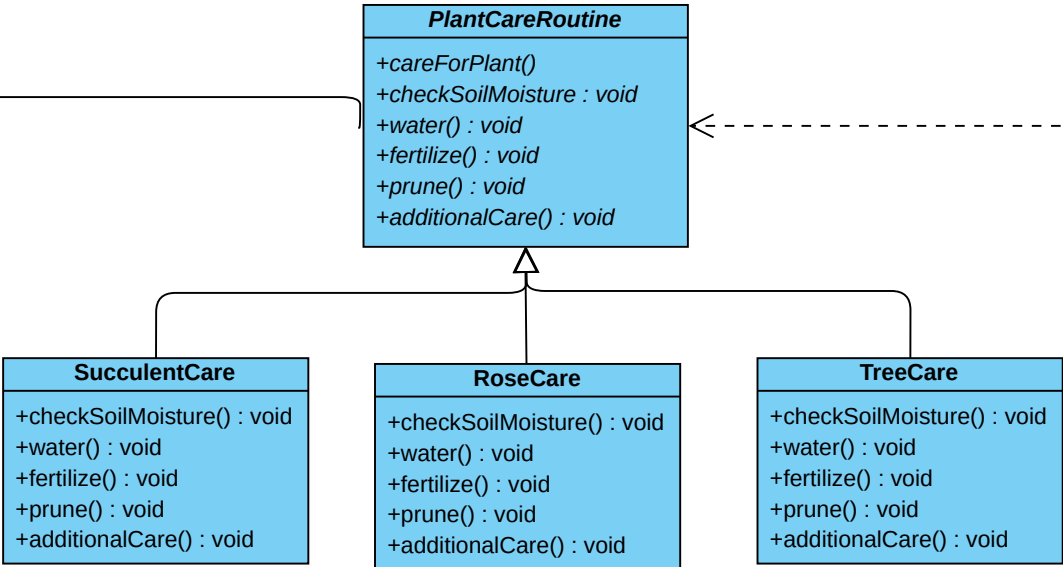

A builder to create complex plant arrangements step by step

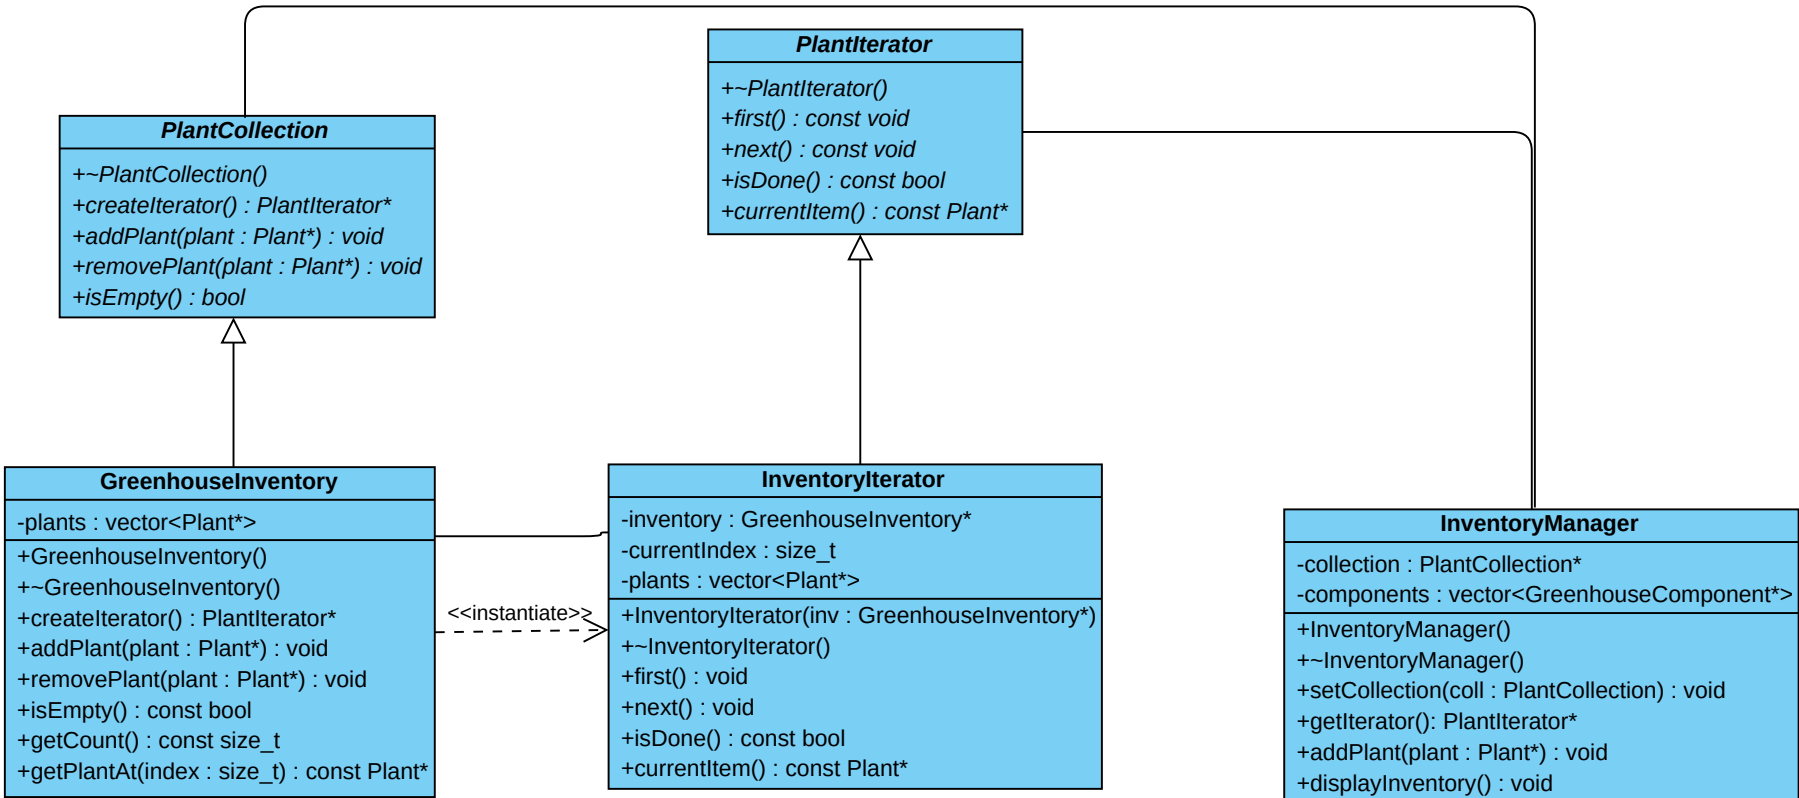

Prototype used to make a clone of a plant
for propagation

Template:
Define care routine skeleton, let
subclasses customize steps

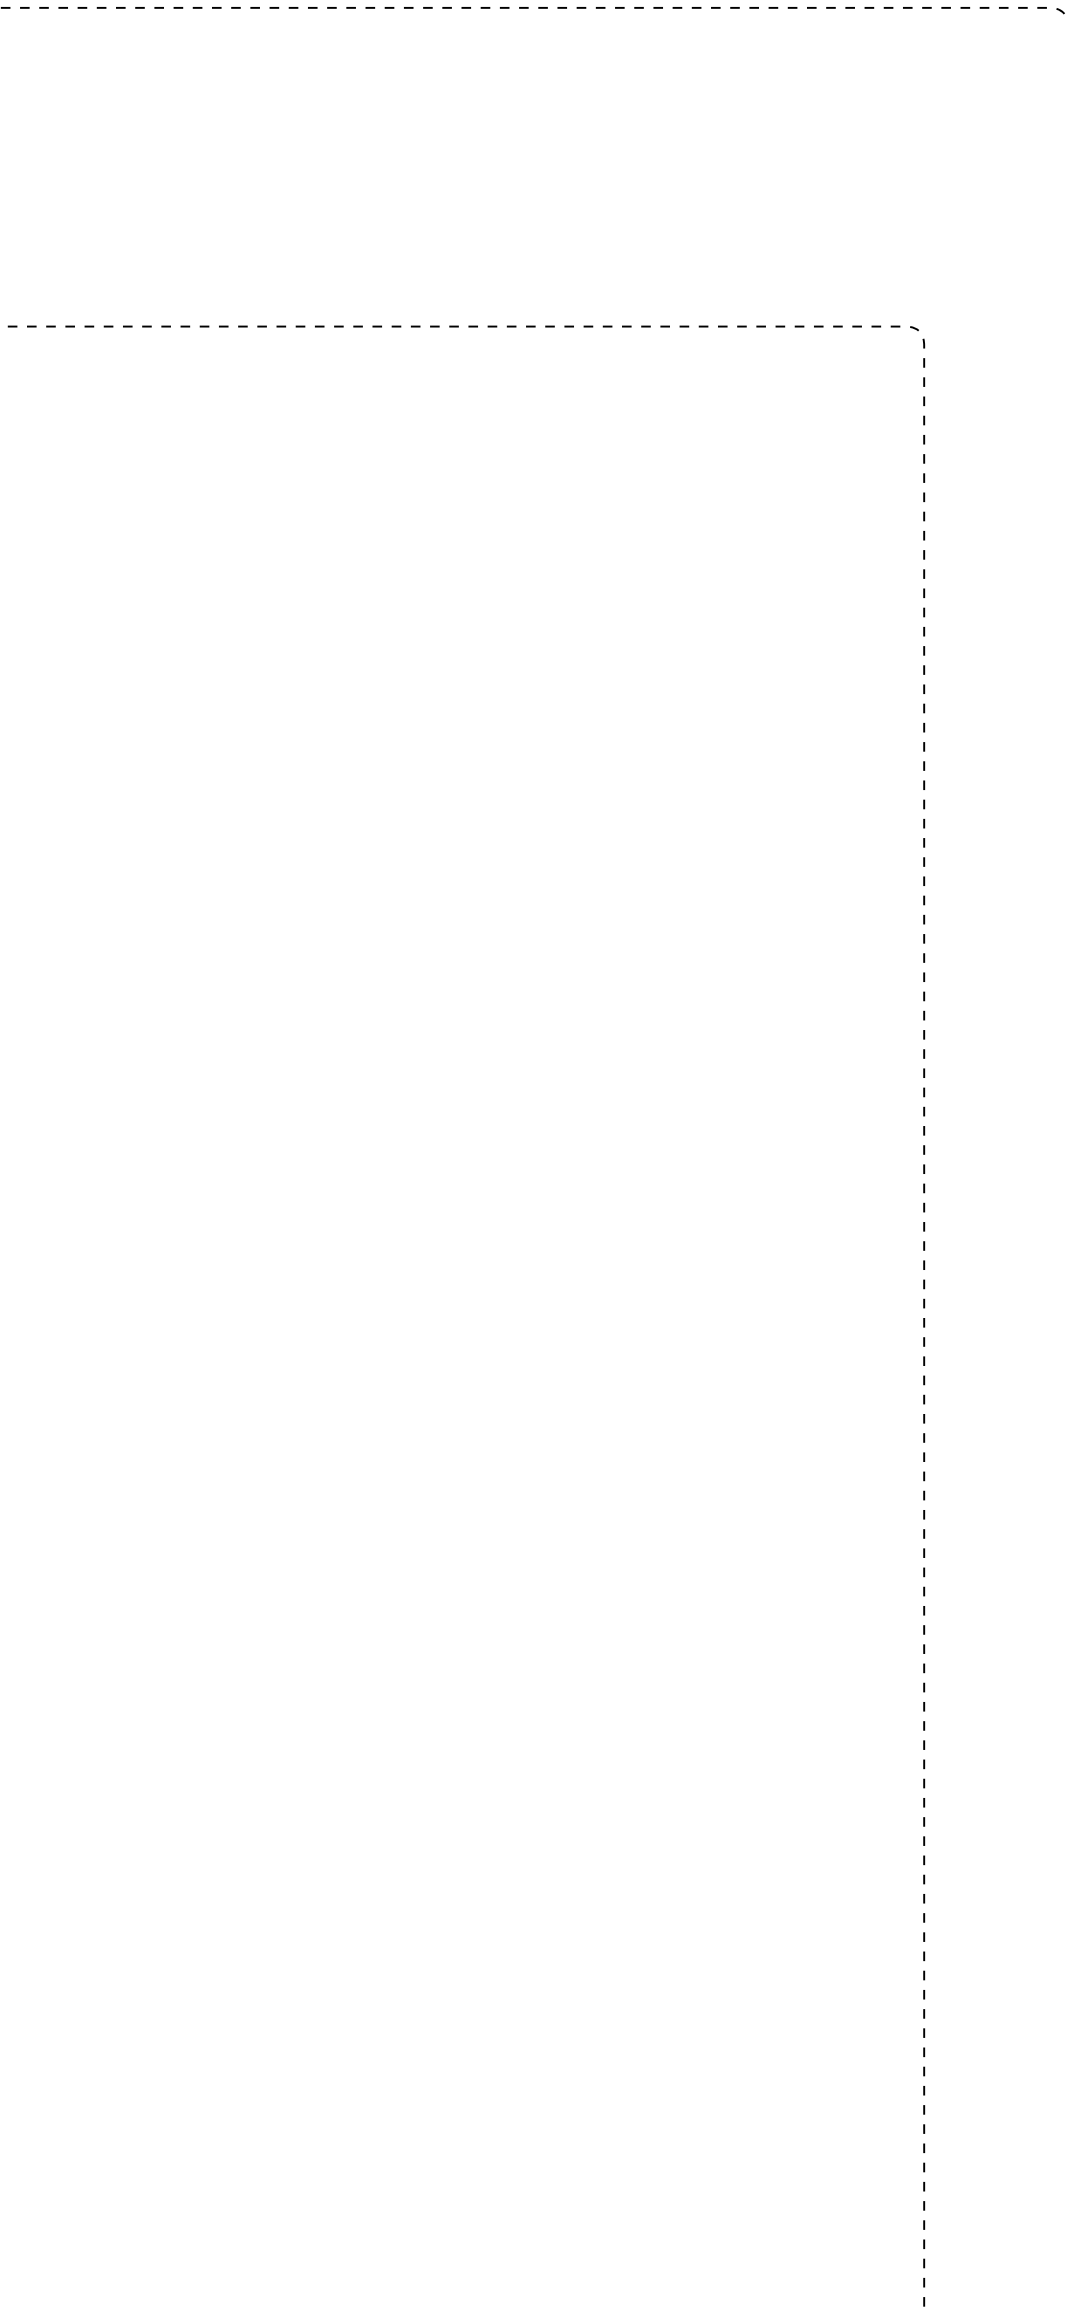

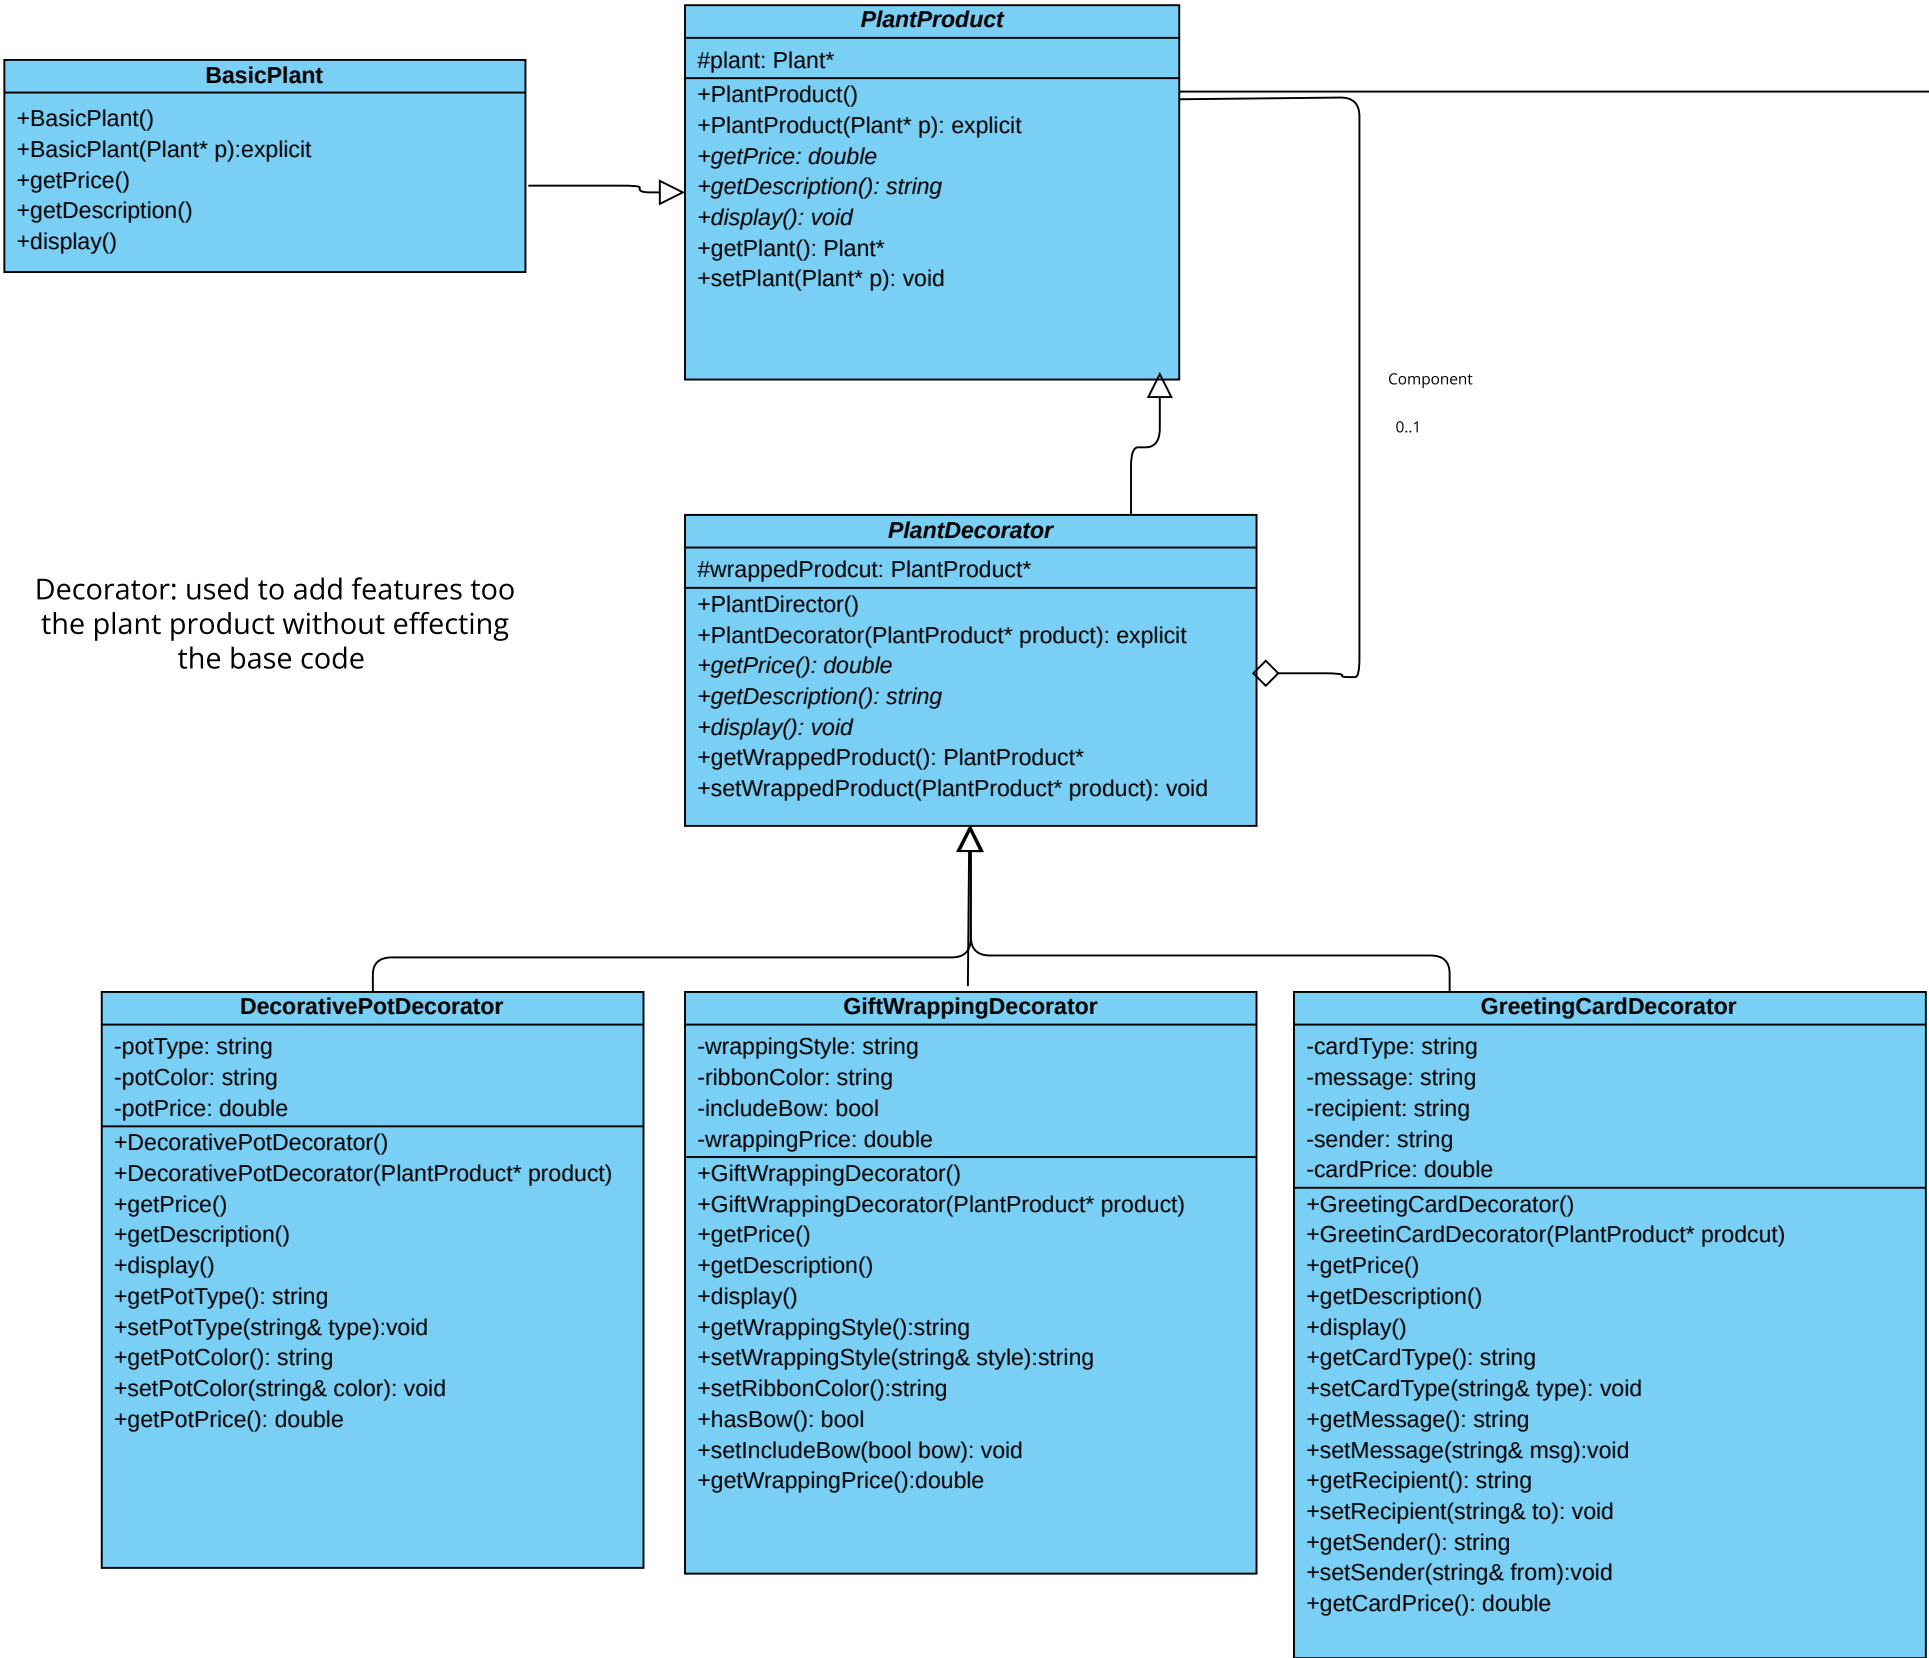

Iterator: Traverse inventory without exposing its structure

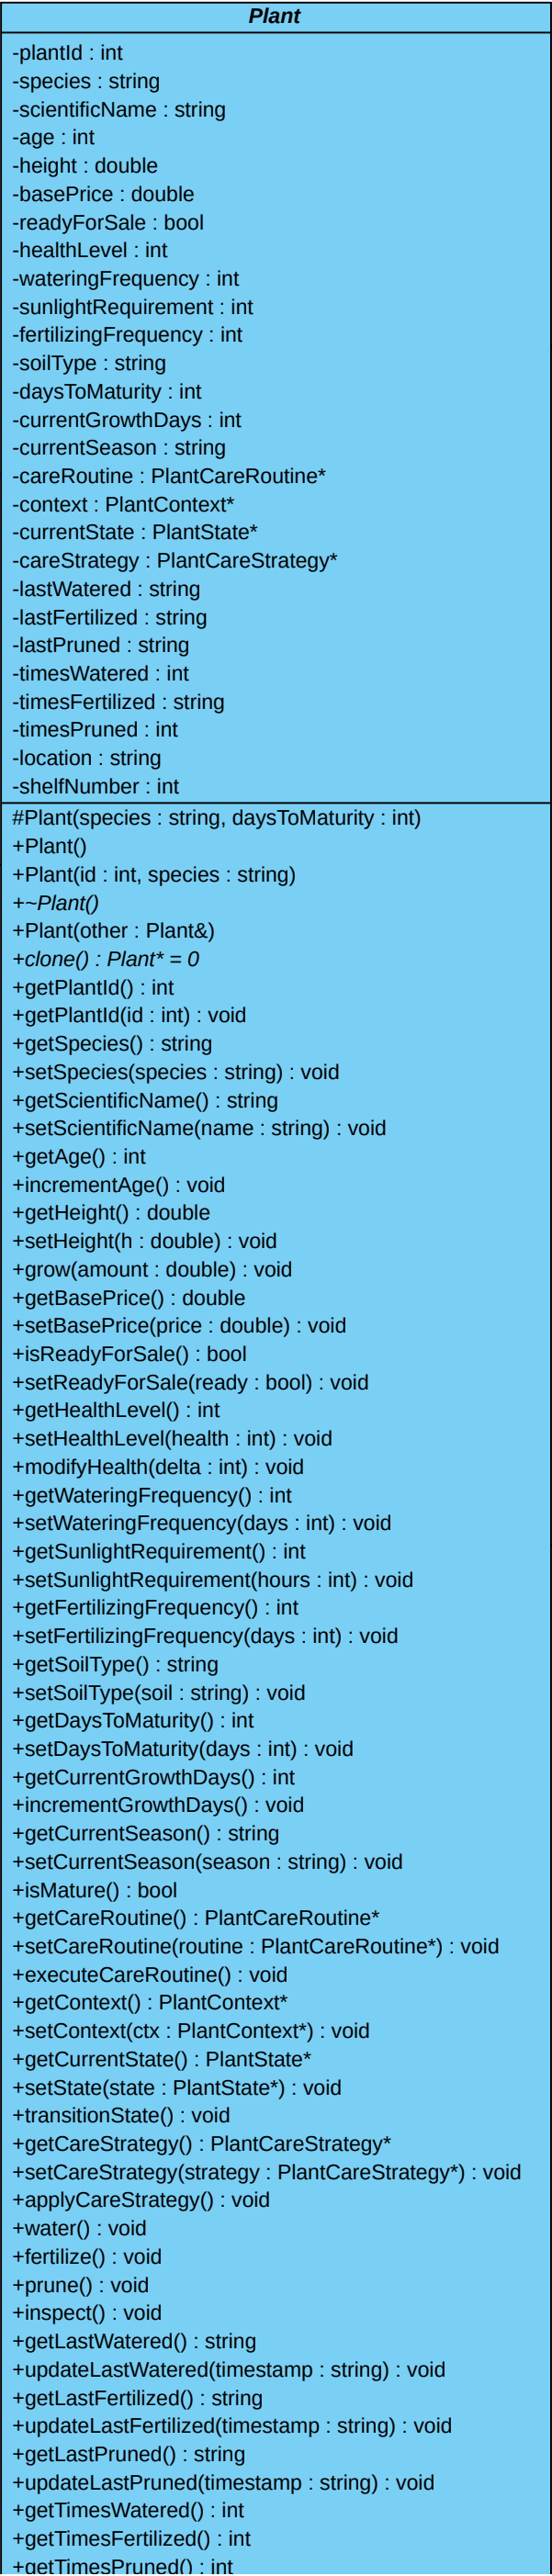

Adapter - Legacy Watering System

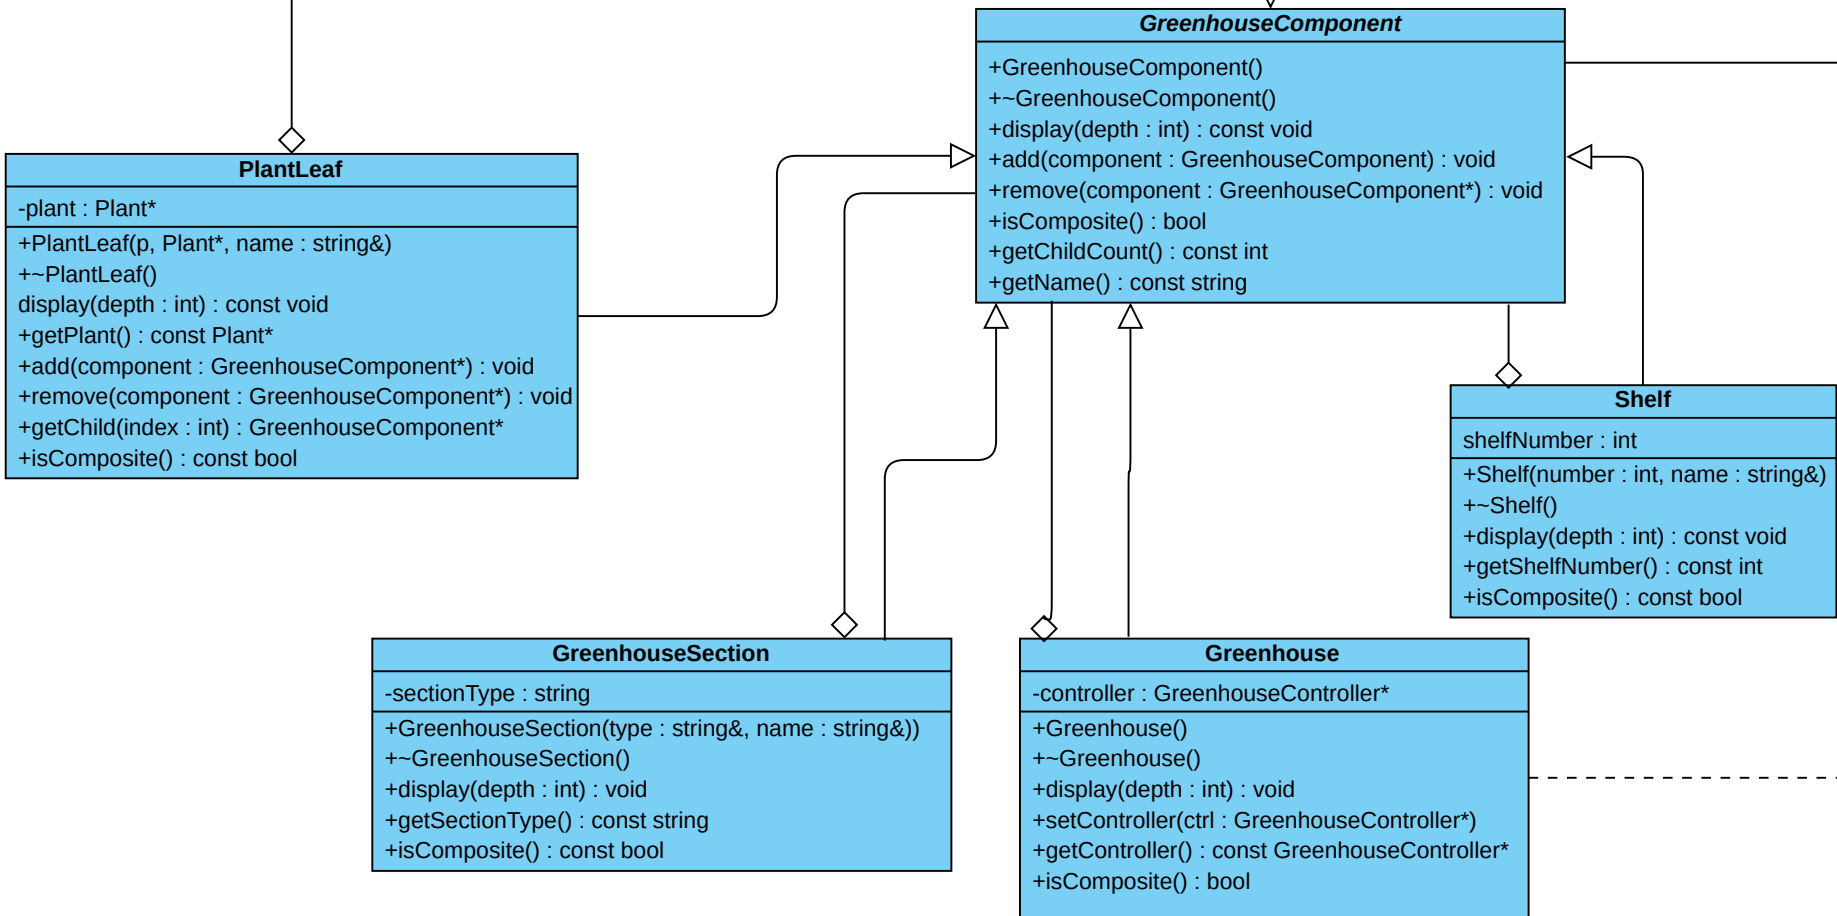

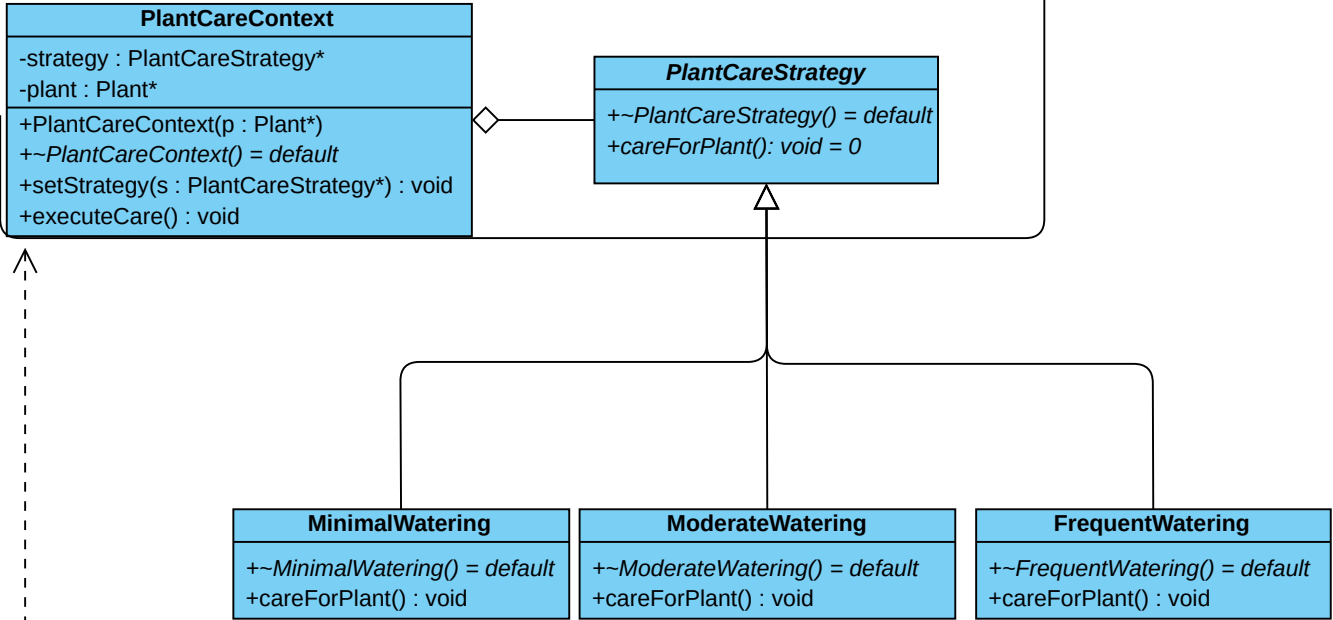

Plant: Abstract Base class for a plant and its functions

Composite: Organize plants in hierarchical sections (greenhouse sections, shelves, individual plants)

Strategy pattern used for the plants health/care

State pattern: used to determine where in the plants life cycle it is
